Name: Theodore Hancock

Date: 12/11

Week: 13

Coding Topic: Threads, executors, runnables (submission 2)

Description of Understanding: I had a really hard time with this one and it was confusing the whole time but I think I got it figured out. Basically in the end it's the ability to run multiple "operations" at the same time. Much like a CPU its able to process more than just one thing at a time. In the example I made, it is able to run different programs at the same time and it writes the output to an atomicreference.

Submission 2

I scrubbed what I had and my team helped me through the assignment. They helped me a lot with the code and have been amazing!
