Coding Topic: Servlet

Description of Understanding: “Java Servlets are an efficient and powerful solution for creating dynamic content for the Web. Over the past few years Servlets have become the fundamental building block of mainstream server-side Java. The power behind Servlets comes from the use of Java as a platform and from interaction with a Servlet container. The Java platform provides a Servlet developer with a robust API, object-orientated programming, platform neutrality, strict types, garbage collection, and all the security features of the JVM. Complimenting this, a Servlet container provides life cycle management, a single process to share and manage application-wide resources, and interaction with a Web server. Together this functionality makes Servlets a desirable technology for server-side Java developers.”

File	Git Link	What should I be looking for?	Sandbox or Your code?
servlet.java index.html	https://github.com/blakejth/CIT360/tree/master/Assignments/servlet	Code in both index and servlet file. The index grabs a user inputted fruit and then displays a new page with a link that takes them to fruit information.	60 mine 40 sandbox
